

Albert Haim

Professor of Chemistry
1966-2001

Master Kineticist and Teacher

Role of the Bridging Ligand in Inner-Sphere Electron-Transfer Reactions, *Accounts of Chemical Research*, **8**, 264 (1975).

Professor Haim's research in inorganic reaction mechanisms involved detailed kinetic studies and targeted redox and substitution reactions of transition metal complexes. His deep understanding of kinetics and mechanisms was an invaluable asset to colleagues and students and, through his journal editorship, to the larger scientific community. He was recognized as a charismatic classroom teacher.
